Auto Poster Project: Iteration 8

For Iteration 8, we unfortunately encountered unforeseen obstacles that will prevent the project from being completed. In submitting the Facebook application for review, we discovered the following:

- In order to use the `publish_to_groups` permission, it can only be used by a verified business or organization – not an individual.
- The autoposter program would need to be ported to a web application in order to use. It can only originate from a URL or be a verified app already in place at an app store (Apple, Google, Microsoft, etc).
